DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statements (IDS) submitted on 3/16/05 & 5/25/05 are in compliance with the provisions of 37 CFR 1.97 and 37 CFR 1.98. Accordingly, the information disclosure statement is being considered by the examiner.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 3-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3711

6. Claims 1 and 3-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Koguchi (4913676). Koguchi discloses a robot bird toy having a control unit (Fig. 1) for controlling the form or positioning of the toy between a standing posture and a forward bent posture (Fig. 8). A trunk portion of the toy body includes a motor, which forms the control unit (Fig. 1). Different movements such as the neck turning and beak opening and closing are performed before, after and during the form change (Fig. 2). A toy component (4) in the form of a lower jaw is arranged on a link (91) facing a frame in a trunk portion of the toy via a lever (102) as part of a four-section link (Fig. 2). Another toy component (4) in the form of an upper jaw is arranged on a swinging link (102) so that it faces the other component and extends away from the frame due to its connection to a rod (99) whose tip is rotatably and swingably engaging with a rotating disk (97) at an eccentric position (Fig. 2). The components are rotated and perform an opening and closing movement with each other due to rotation of the rotating disk (Fig. 2).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Koguchi. Koguchi discloses the basic inventive concept, substantially as claimed, with the exception of the control unit being formed by the leg. At the time the invention was

made it would have been an obvious matter of design choice to have the control unit formed in the leg because Applicant has not disclosed that having the control unit in a leg provides an advantage, is used for a particular purpose, or solves a stated problem. One of ordinary skill in the art, furthermore, would have expected Applicant's invention to perform equally well with the control unit in the trunk or torso of the toy because it is capable of controlling the various movements of the toy from that location.
